If you want only unlock you can do it with **NK-FLASH**.
But if you want change languages, sw versions and repair Nokia mobile phones you will need Dejan box that

works with latest versions of Dejan Flasher 1.03 and 1.04 software.

All this is done without logs

Logs are needed in case of changed IMEI number and this service is provided by the author, Dejan Kaljevic, directly. This product include:

1. Dejan box
2. Cables for all Nokia phones
3. Cd with software Dejan Flasher 1.03 and 1.04 with appropriate flashes, PPM and MCU files
4. Documentation

No further software support is provided because all newer MCU&PPM files can be made by yourself by reading it from a Nokia phone, and with this the conditions are exactly the same as the ones from Dejan Kaljevic himself.

Our Price : 300 Euros

**Motorola EMMI-BOX
version 2.0 include
xx.13.xx**

**Reference:
EMMI-DROID**

Now some operators companies include a new version of FLASH, it's the xx.13.xx, and old EMMI boxes not works if you find a phone with this flash version and maybe sometimes you can break your phone (this box can repair this failure too).

Features:

**Motorola Flashing
EMMI-BOX**

**Reference:
EMMIFLASH**

The EMMI Box not only can unlock series of Motorola mobile phones, but also can flashing the

Motorola mobile phones, upgrading the software version for the phone, changing the language data base of the phone, change IMEI code and clean 8bit speical code etc. this EMMI Box comes with "MotoFlex" software, and user can run the software for achieving the above mentioned functions in their PC.

- Unlock any Motorola phone including flash version xx.13.xx
- Change languages
- Change logos
- Change ringtones
- Fix tampered motorola phones or bad unlocked
- Repair Motorola phones

Include Motorola EMMI box + CD with all necessary programs, EMMIDROID.

Emmidroid is a Hard / Soft set that allows you to connect a motorola mobile phone based on DCS_BUS to the PC. This hardware is known as EMMI-BOX EMMIBOX (Electric Man-Machine Interface). Emmidroid works with an standard 9Volts battery. Don't need any external power adaptor, thats allow a better independence to works with laptops. Emidroid V2.3 allow to unlocj any Motorola phone based on DCS_BUS , including xx.13.xx versions The new motorola phones T191,T192,T193 y V66, can not be unlocked at this moment. But we are working to offer an update in the next version of software and provide appropriate connectors. Thre is two big groups of motorola phones, depends on CPY model that they use:

- Motorola Phone based on 68000 CPU, by example:
7500, 6200, CD920,CD930,CD928, L2000, CD520, D170, D160, M3588, STARTAC, T250 ,

mentioned functions in their PC.

- Flashing ROM and Upgrading the software of Motorola mobile phones
- MotoFlex 7.6 software included
- Unlock the Motorola mobile phones
- Remove SP Lock
- Change IMEI code
- Clear 8bit special code
- Change Startup Logo
- Edit ringer tone
- Keypad testing function
- Make the phone in testing condition
- Applicable for Motorola StarTac/
V8088/V3688/L2000/328/338/920/928/
T2288/T180/C560/D160/D560/M3588 etc.
- AC/DC Adaptor included

Our Price : 601 Euros

etc.

- Motorola Phones based on Arm CPU, by example:
V3688, V2288, V8088, T2288, V50, V100, V66

With Emidroid V2.3 is possible to dump and read the full flash of any Motorola Phone and save as a .bin file. You can Dump ROM of this phones using EMMI-DROID at 1Mbyte by 2.5 minutes, against of Motokey of Zulea that takes 75 Minutes every 1 Mbyte. You can load flex files that have phone configurations, logos, ringtones, phonebook ,etc) on any phone. Actual version allow FLASHING phones based on CPU 68000 and V3688 based on ARM CPU.

Very soon will be available a software update to allow to flash any Motorola Phone with ARM CPU too.

EMMI-DROID allow to repair broken phone by bad flashing, allowing to fix phones that never can be turned on.

Our EMMI-DROID equipment implement the full DCS protocol including 3 layers, and allowing synchronizing and retry when occurs frame errors, this offer you the security to unlock any Motorola phone always without any risk. Other roemmis and clips implementation in the market not implement DCS protocol, only send some messages to the mobile phone, without analyzing answer messages from the mobile phone

Motorola EMMI box
Reference:
MOT-EMMI

RoEMMI and Motokey
to unlock, flash, fix
tampered motorolas
Reference:

New Unlocking EMMI Box can unlock and repair software breakdown of series of Motorola mobile phones, like V8088 /

V998 / V3688 / L2000 / 328 / 338 / 920 / 928 / 938/ T2288/ T180 / C560 / D160 / D170 / D560 series mobile phones. No computer required, no disassembling the phone required, its operation is very simple by pressing the phone keypad is okay. This unlocking EMMI Box can clean 8bit special code, remove SP lock, unlock the phone, change IMEI code.

Main features:

- Unlock the Motorola mobile phones
- Remove SP Lock
- Change IMEI code
- Clear 8bit special code
- Applicable for Motorola StarTac / V8088 / V3688 / L2000 / 328 / 338 / 920 / 928 / T2288 / T180 / C560 / D160 / D560 / M3588 etc. mobile phones
- AC/DC Adaptor included
- No computer required
- No disassembling required

MOTOKEY

RoEMMI

+

MotoKEY dangle adapter

RoEMMI + Motokey dangle adapter will unlock any Motorola Digital Phone (GSM / DCS / PCN / Dual / TriBand) !!

Now our RoEMMI with MotoKey box become more powerfull than original Flashing EMMI box, known as EMMI 2D - SLN3577D, (ref: EMMI-FLASH).

This adapter will enable RoEMMI (small EMMI SP unlocking box on printer port) to:

- **Unlock the latest versions (xx.13.xx) in 4-5 seconds - NO NEED TO OPEN PHONE !**
- **Repair "Tamper alert" in 2-3 seconds - NO NEED TO OPEN PHONE !**
- Repair ALL software bugs (after wrong unlocking, etc...)
- Flash phone (change Call Processor software and Language Pack)
- Read Flash from phone (realy works on all models)!!
- Build your own Call Processor and Language Pack files from readed flash!!
- Downgrade firmware (version)
- Flex phone (change various flex parameters of phone)
- Edit EEPROM contents
- No more need ECP/EPP settings on LPT port

Advantages over the clone/original Flashing EMMI 2D are:

Flash file go directly to phone Faster flashing, NO more need to send flash file via COM port

All that will work with all motorola models V8088 328, 928, T2288, T180, C569, D160, D560, M3588, Timeport-P7389, Timeport-L7089, V3688, StarTac-130, StarTac-72, StarTac-70, CD920, CD930, 3690, V50, and more.

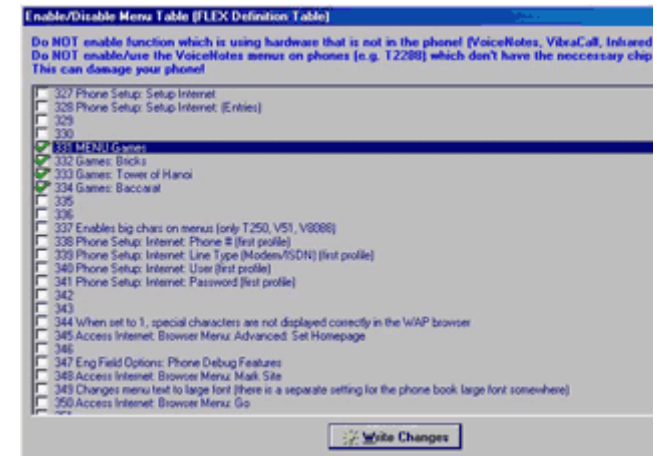

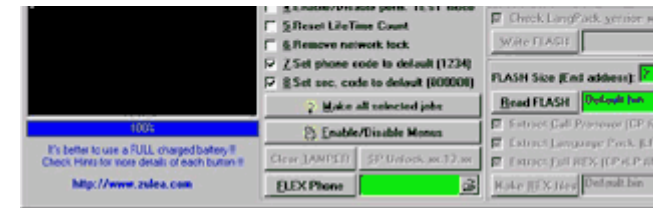

You can change language using this Language packs:

different cables that can be used with more than 100 different mobile phone models.

This universal unlocking box comes with connectors for almost all kinds mobile phone, we will supply the most popular phone connectors with this universal unlocking box, so user can use the

appropriate software for unlocking and data transferring for all kinds mobile phone with this unlocking box. For example, user can use this unlocking box with Nokia Data Suite software for changing phone book, and change logos and ringtones with using Logo Manager software etc. Also, user can run most free unlocking software in the Internet for unlocking their mobile phone too. This box can completely do all the things that the individual data cables can do.

Function:

Unlocking ; Clear 8bit special code; Remove SP Lock; Change IMEI code; Data transferring; Connecting to Internet; etc.

Remark: All above functions can be achieved by software (same to the software for individual data cables), you can download software from our [members page](#).

Operation Instruction:

Connecting the equipment to the AC/DC Adaptor (not included), plug the AC/DC adaptor into AC outlet, turn the equipment power ON, the power indicator (LED) will light, then connect your

mobile phone to the equipment with appropriate adapter, and turn the mobile phone power ON, then you can start to run the program of software to achieve unlocking, data transferring and other utilities the software provided.
