Cellular Telephone Interceptor Multi Digital Versions (Including GSM and TDMA)

GSM System \$420,000.00

GSM Interceptor Pro

This is an advanced monitoring system designed to intercept GSM cellular traffic. It is the most sophisticated - advanced state of the art equipment of it's kind. It is **custom made** to certain specifications according to the cellular system in your country

Features

8 channels 900/1800 MHz,
(System with 1900 MHz is also available).
The system can target specific numbers or randomly

TDMA System \$280,000.00

TDMA Interceptor Pro

The system is an advanced monitoring system designed to intercept TDMA cellular calls. Designed to work in networks that specifically using D-AMPS.

Features

Scan Control Channels to locate a working base station in a given area.
Automatic adjustments in the configuring file.
Fast receivers presetting using data from the configuration files.

screen GSM mobile Communication.
 Conversations are monitored and logged simultaneously to voice and data logger for storage and retrieval..
 Housed in industrial PC 19" rack mounted portable cabinet with attached keyboard and LCD monitor.
 Weight:12 Kg about 23 Lb.
 Decodes voice codes LPT, RPE and EFR.
 Works with identifiers IMSI, TMSI, IMEI, and MSISDN.
 Can receive BCCH, CCCH, SACCH, SDCCH, FACCH, and TCH
 Find incoming call number when call ID is available.
 Intercept 1 voice duplex Channel.
 Possibility to receive SMS Messages.
 Working range: Forward Channel 25 KM or 15.6 Miles, Reverse Channel depends on conditions - varies from 300 to 800 meters, or up to half a mile
 If unidirectional antennas are used, the range can be increased.

Encryption Modes:

A5.2 cooperation with network operator is not needed, the system works in real time.
 A5.1 If cooperation with network operator is possible, the system works in real time.

If cooperation with network operator is not possible but there is an access to mobile phone, information can be extracted directly from SIM card, Extraction time – 15 Min., SIM card scanner should be added to the system.

With special hardware and software module A5.1 Decoder the interceptor works without Cooperation with network operator. Item: 4001-D.

Store telephone conversations on the hard drive.
 Monitoring the activity of phone numbers from the "list of interest".
 Listening and recording all phone conversations of the accessible base station or only from the "list of interest".
 Displaying and recording all events in the control channels.
 Displaying status of all phones from the "list of interest".

The system can control the following channels :

Forward control channels IS-S4 & IS-136 (monitoring of incoming calls in one cell)
 Forward traffic channel (listening to conversations in the forward/ outgoing direction)
 Reverse control channel (defines outgoing phone numbers).

Note:We may sell the unit to you only if you representing a government or law enforcement agency or you are selling it to the Government or a Law Enforcement agency in your country.

We will 100% verify it and also require a letter certifying that.

Demonstration

Our technician will travel to demonstrate the unit in your country, the demonstration is usually done upon 2 weeks notification.

We will send 2 people to your country For demonstration, cost for demonstration \$7,000

Available to Law Enforcement agencies ONLY.
